

# BILLY GOAT FINISH MOWER Owner's Manual

FM3301 & FM3301E Patent Number: D494985

## **Accessories**

## **Mulching Kit**

Reduces lawn clippings to fine nutrient-rich particles that filter down to the soil.

P/N 520144

#### **Grass Catcher Kit**

Easily convert your mower to bag grass and leaves.

P/N 520142

#### Transaxle Guard Kit

To protect the transaxle from accidental contact from concrete curbs or other hazards.

P/N 520155

## **ABOUT THIS MANUAL**

**THANK YOU** for purchasing a BILLY GOAT <sup>®</sup> *FM Mower*. Your new machine has been carefully designed and manufactured to provide years of reliable and productive service. This manual provides complete operating and maintenance instructions that will help to maintain your machine in top running order. Read this manual carefully before assembling, operating, or servicing your equipment.

## **CONTENTS**

## **GENERAL SAFETY INSTRUCTIONS and SYMBOLS**

The safety symbols shown below are used throughout this manual. You should become familiar with them before assembling, operating, or servicing this equipment.

WARNING: This symbol indicates important information that will prevent injury to yourself or others.

This symbol indicates ear protection is recommended when operating this equipment.

This symbol indicates eye protection is recommended when operating this equipment.

This symbol indicates gloves should be worn when servicing this equipment.

This symbol indicates that this manual and the engine manufacturer's manual should be read carefully before assembling, operation, or servicing this equipment.

This symbol indicates important information that will prevent damage to your BILLY GOAT <sup>®</sup> FM Mower.

This symbol indicates the engine oil level should be checked before operating this equipment.

Read and make sure you thoroughly understand the following safety precautions before assembling, operating or servicing this equipment:

**READ** this manual and the engine manufacturer's manual carefully before assembling, operating, or servicing this equipment.

**EAR PROTECTION** is recommended when operating this equipment.

**EYE PROTECTION** is recommended when operating this equipment.

**BREATHING PROTECTION** is recommended when operating this equipment.

**EXHAUST** from this product contains chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

**DO NOT** operate this equipment on any unimproved forested, brushy, or grass covered land unless a spark arrester is installed on the muffler as required by Section 4442 of the California Public Resources Code. The arrester must be maintained in good working order. Other states may have similar laws. Federal laws apply on federal lands.

**DO NOT** run engine in an enclosed area. Exhaust gases contain carbon monoxide, an odorless and possibly fatal poison.

## BILLY

#### FM Owner's Manual

WARNING: IMPORTANT! This cutting machine is capable of amputating hands and feet and throwing objects. Failure to observe the following safety instructions could result in serious injury or death.

 $\bigwedge$ 

- WARNING: O DO NOT run this equipment indoors or in any poorly ventilated area. Refueling outdoors is recommended.
  - **DO NOT** refuel this equipment while the engine is running. Allow engine to cool for at least two minutes before refueling.
  - O DO NOT store gasoline near an open flame.
  - O DO NOT remove gas cap while engine is running.
  - O DO NOT start or operate engine if strong odor of gasoline is present.
  - ODO NOT start or operate engine if gasoline is spilled. Move equipment away from spill until gasoline has completely evaporated.
  - O DO NOT smoke while filling the fuel tank.
  - O DO NOT check for spark with spark plug or spark plug wire removed. Use an approved spark tester.
  - **DO NOT** operate engine without a muffler. Inspect muffler periodically and replace if necessary. If equipped with muffler deflector, inspect deflector periodically and replace if necessary.
  - O DO NOT operate engine with grass, leaves or other combustible material near the muffler.
  - ODO NOT touch muffler, cylinder, or cooling fins when hot. Contact with hot surfaces may cause severe burns.
  - ODO NOT leave equipment unattended while in operation.
  - ODO NOT park equipment on a steep grade or slope.
  - O DO NOT operate equipment with bystanders in or near the work area.
  - O DO NOT allow children to operate this equipment.
  - ODO NOT operate equipment with guards removed.
  - O DO NOT operate equipment near hot or burning debris or any toxic or explosive materials.
  - O DO NOT operate equipment on slopes greater than specified in Specifications section of this manual.
  - ODO NOT operate barefoot or wearing open sandals. Always wear substantial footwear
  - ODO NOT place hands or feet underneath unit, or near any moving parts.
  - O DO NOT pull mower backwards unless absolutely necessary
  - O DO NOT operate the mower while under the influence of alcohol or drugs.
  - ODO NOT operate mower in wet grass. Always be sure of your footing; keep a firm hold on the handle and walk; never run.
  - O DO NOT mow on wet grass. Reduced footing could cause slipping.
  - ODO NOT mow near drop-offs, ditches, or embankments. The operator could lose footing or balance
  - O DO NOT mow excessively steep slopes.
  - ODO NOT change the engine governor setting or overspeed the engine.

**ALWAYS** Stop the blade(s) when crossing gravel drives, walks, or roads.

ALWAYS Shut the engine (motor) oft and wait until the blade comes to complete stop before removing grass catcher.

**ALWAYS** Mow only in daylight or good artificial light.

ALWAYS Disengage the self-propelled mechanism or drive clutch on mowers so equipped before starting the engine.

ALWAYS wear safety goggles or safety glasses with side shields

ALWAYS remove spark plug wire when servicing equipment to prevent accidental starting.

**ALWAYS** check fuel lines and fittings frequently for cracks or leaks. Replace if necessary.

ALWAYS store fuel in approved safety containers.

## **△WARNING:** Important

Remove all rocks, wire, string, etc. that can present a hazard during work prior to starting.

**DO** identify and mark all fixed objects to be avoided during work such as sprinkler heads, water valves, limbs, or clothes line anchors, etc.

#### **SOUND**

SOUND LEVEL 88 dB(a) at Operator Position

108 dB(a)

Sound tests were conducted in accordance with 2000/14/EEC, and were performed on 8-15-2003 under the conditions listed below.

△Sound power level listed is the highest value for any model covered in this manual. Please refer to serial plate on the unit for the sound power level for your model.

General Conditions:

Temperature:

Wind Speed:

Sunny

86°F (30°C)

2.4 mph (3.9 kmh)

Wind Direction: South Humidity: 57%

Barometric Pressure: 30.2Hg (767 mm Hg)

#### VIBRATION DATA

#### VIBRATION LEVEL 2.65g (25.20m/s<sup>2</sup>)

Vibration levels at the operator's handles were measured in the vertical, lateral and longitudinal directions using calibrated vibration test equipment. Tests were performed on 5-26-2006 under the conditions listed below.

General Conditions: Sunny

Temperature: 87.44°F (30.8°C)
Wind Speed: 3.1 mph (5.04kph)
Wind Direction: South East

Humidity: 41.5%

Barometric Pressure: 29.89Hg (101.25kpa)

#### **INTENDED USE**

**INTENDED USE:** This unit is mainly designed for cutting grass. Some overgrown weeds, and taller grass may also be cut. Be sure to inspect work area and machine before operating. Make sure that all operators of this equipment are trained in general machine use and safety.

#### INSTRUCTION LABELS

The labels shown below were installed on your BILLY GOAT ® FM Mower. If any labels are damaged or missing, replace them before operating this equipment. Item numbers from the Illustrated Parts List and part numbers are provided for convenience in ordering replacement labels. The correct position for each label may be determined by referring to the Figure and Item numbers shown.

**LABEL PATENT FM** ITEM#178 P/N520191

## THROTTLE CONTROLS AND LABELS

SPEED CONTROL

5th gear (Transporting Speed): Lift up on the lever then push to engage in the 5th gear.

Rev: Lift up on the lever then pull back for reverse.

Electric Start Only Pull up on the switch then push forward to start the engine.

## **PACKING CHECKLIST**

Your Billy Goat Mower is shipped from the factory in one crate, completely assembled except for the handles and console assembly.

**READ** all safety instructions before assembling unit.

**TAKE CAUTION** when removing the unit from the box.

PUT OIL IN ENGINE BEFORE STARTING

## **PARTS BAG &** LITERATURE ASSY

Warranty card P/N- 400972, Owner's Manual P/N-520187.

## **ASSEMBLY**

**NOTE**: All item numbers called out in the assembly, operation, and maintenance sections of this manual can be found on Parts List (pages 15-18).

- 1. Cut and remove the nylon retaining straps (see figure 11-1).
- 2. With the console and handle assembly positioned as shown in Figure 11-3, insert the shift linkage rod (Item 31) into the shift linkage connector (Item 54).
- 3. To assemble the shift rod (item 31) to the shift linkage (item 54). use the roll pin in the parts/literature bag. If you'll notice on the shift linkage, the hole is larger on one side than the other. It will be easier to start the roll pin from the larger side, forcing it through the shift rod and the hole on the other side of the shift linkage, using a hammer or large adjustable pliers.
- 4. Insert one of the handle mounting bolts (Item 102) with split lock washer (Item 6) on top of flat washer (Item 184) through the rear handle mounting hole of the right side handle, and screw it into the rear handle mounting hole on the right side of engine base chassis (Item 61). Repeat this procedure for the left side using the left handle.
- 5. On each side of the mower, insert one of the handle mounting bolts (Item 102) with split lock washer (Item 6) on top of flat washer (Item 184) through the hole in one end of the handle brace (Item 32), the front handle mounting hole of the handle and screw into the front handle mounting hole in the engine base chassis (Figure 11-5).
- 7. Position control cables and use 2 cable ties on each handle to secure the cables in position. The top cable tie should be 1" below the console and the lower tie should be 12" below the console (see figure 11-8 and 11-9).
- 8. Check the position of the shift rod guide (Item 69), and if necessary, snap it in place in the shift bracket (Item 78) as shown in Figure 11-10.
- 9. Put shift lever in NEUTRAL, depress the brake lever (release the brake) and carefully pull the machine back off the pallet.
- 10. Fill with oil and gas to the proper level and the unit is ready to mow. (A battery will also have to be installed on electric models.) 11. Read the operator's manual.

Part No 520187 Form No F071406A 9

#### **OPERATION**

▲Like all mechanical tools, reasonable care must be used when operating machine.

Inspect machine work area and machine before operating. Make sure that all operators of this equipment are trained in general machine use and safety.

PUT OIL IN ENGINE BEFORE STARTING

#### **STARTING**

ENGINE: See engine manufacturer's instructions for type and amount of oil and gasoline used. Engine must be level when checking and filling oil and gasoline.

**ENGINE SPEED:** Controlled by throttle lever on the control console plate.

FUEL VALVE: Move fuel valve to "ON" position (when provided on engine).

CHOKE: Operated with the throttle control by moving the throttle control to the full start position.

THROTTLE: Move remote throttle control to fast position. Pull starting rope to start engine.

ELECTRIC START: Choke the engine if necessary. Pull up then push forward on the toggle switch until engine starts, then release switch to run.

- 1. Select desired cutting height before starting engine.
- 2. Be sure drive lever or blade lever are not engaged.
- 3. Choke if necessary.
- 4. Pull back on starter rope slowly until resistance is felt. Then pull cord rapidly to start. Repeat if necessary.

Do not operate if excessive vibration occurs. If excessive vibration occurs, shut engine off immediately and check for damaged or worn blade, loose blade jam nut, loose engine or lodged foreign objects. Note: See maintenance section for proper blade jam nut torque specifications.

## **HANDLING & TRANSPORTING:**

Using two people to lift machine is recommended. Lift holding the handle and front of deck. Secure in place during transport.

Never lift the machine while the engine is running. ENGINE MUST BE OFF while handling, lifting, or transporting the unit on or off the vehicle.

#### **STORAGE**

Never store engine indoors or in enclosed poorly ventilated areas with fuel in tank, where fuel fumes may reach an open flame, spark or pilot light, as on a furnace, water heater, clothes dryer or other gas appliance.

If engine is to be unused for 30 days or more, prepare as follows:

⚠ Be sure engine is cool. Do not smoke. Remove all gasoline from carburetor and fuel tank to prevent gum deposits from forming on these parts and causing possible malfunction of engine. Drain fuel outdoors, into an approved container, away from open flame. Run engine until fuel tank is empty and engine runs out of gasoline.

NOTE: Fuel stabilizer (such as Sta-Bil) is an acceptable alternative in minimizing the formation of fuel gum deposits during storage. Add stabilizer to gasoline in fuel tank or storage container. Always follow mix ratio found on stabilizer container. Run engine at least 10 min. after adding stabilizer to allow it to reach the carburetor.

**CAUTION**: Wheels must be chocked or blocked when unit is parked on a slope.

#### **CUTTING OPERATION**

**CAUTION**: Shut off the blades when crossing gravel drives, walks or roads and under all conditions where thrown objects might be a hazard.

△ CLEARING A CLOGGED CUTTING DECK: Turn engine off and wait for blade to stop completely. Disconnect spark plug wire.

Wearing durable gloves, remove clog. **Danger**, the clog may contain sharp materials. Reconnect spark plug wire.

⚠ CAUTION: Use extreme care when operating the blades. Inspect the work area for foreign objects that could cause damage to the unit or injure the operator if struck by the blade. Never operate the blades with bystanders in the work area.

**GENERAL OPERATION**: To engage the blades, depress the operator's left hand control lever against operator's handle. The blade is disengaged by releasing this lever. (See Fig. 1.1) To engage the wheel drive press down on the brake lever, lift the operator's right hand control lever against operator's handle. The drive is disengaged by releasing this lever. (See Fig. 1.2) Ground speed can be varied by shifting gears as described on page 12. To begin cutting, engage the blade lever, allow the blade to spin up to speed, and engage the wheel drive to begin moving forward into the material to be cut. NOTE: Do not engage blades during transport between work sites. The blade should remain disengaged at all times when work is not being performed. The best performance is achieved when cutting in dry conditions. If the deck becomes choked with grass or debris during operation, back unit off of debris allowing machine to clear itself and continue cutting, or shut the unit off and clear the clog by hand (See above). A drop in engine RPM or a noticeable change in engine sound is usually a good indicator of a clogged discharge or other interference.

Under most conditions cutting should be done in second or third gear. Fourth gear should be reserved for conditions where grass is thinned out or not as tall. The quality of the cut produced is directly related to the unit's ground speed during cutting. If the quality of the cut is not satisfactory (i.e. material left standing) you should shift into a lower gear during cutting. For improved control in confined areas, this machine can be pushed forward or backward by releasing the drive lever and shifting to neutral located at the bottom of the operator's right-hand handle while depressing the brake release lever.

#### **CUTTING HEIGHT ADJUSTMENT**

CAUTION: DO NOT make cutting height adjustment when engine is running. Cutting height can be adjusted from 1.5" to 4" by placing spacers above or below caster spindles. For easiest adjustment change the height on one side at a time. To change cutting height, tilt the unit back, remove lynch pin, remove all spacers then set if off to the side, remove caster rig, add or subtract spacers, reinstall caster rig, place remainder of spacers if any, then reinsert lynch pin (see figure 16-1 through 16-4). Repeat this step on other side.

NOTE: Be sure that the spacers are even on both casters. Running the deck out of level will result in poor cut quality and increased belt wear.

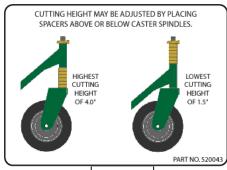

Fig. 16-1

Fig. 16-2

Fig. 16-3

Fig. 16-4

#### **BLADE CLUTCH**

The FM mower blade clutch is controlled by an operator presence control. To engage the blade, depress the operator's left hand control lever against operator's handle. The blades are disengaged by releasing this lever. (See figure 16-5)

**NOTE**: The blade clutch must be either fully engaged for cutting or fully disengaged to bring the blades to a stop. Do not operate the unit with the blade clutch partially engaged. Premature belt wear and clutch failure will result from improper operation of the clutch.

⚠CAUTION: Use extreme care when operating the blades. Inspect the work area for foreign objects that could cause damage to the unit or injure the operator if struck by the blade. Never operate the blades with bystanders in the work area. Lever operates the blade without either the discharge deflector chute or the grass catcher in place.

#### **PROPULSION**

This unit is self-propelled, and is controlled by an operator presence control. To engage the wheel drive, first push down on the BRAKE RELEASE lever on the right side, and then lift the operator's DRIVE lever on the right side against operator's handle. The drive is disengaged by releasing the lower lever. (See figure 16-6). Shift to neutral, push and hold the Brake lever to free wheel.

**GROUND SPEED** can be varied by selecting a higher or lower gear using the gearshift lever on top of the console (see figure 16-7). **Note**: Only change gear selection when unit is stopped. Under most conditions cutting should be done in second or third gear. Fourth gear should be reserved for conditions where grass is thinned out or not as tall. The quality of the cut produced is directly related to the unit's ground speed during cutting. If the quality of the cut is not satisfactory (i.e. material left standing), you should shift into a lower gear during cutting. For improved control in confined areas, this machine can be pushed forward or backward by releasing the drive lever located at the bottom of the operator's right-hand handle, and shifting to neutral while depressing the brake release lever.

#### **HILLSIDE MOWING**

▲ WARNING! Never mow on any slope greater than 15 degrees. Always mow across the face of slopes; never up and down or diagonally (see figure 16-8). DO NOT attempt sudden starts or stop when mowing on a slope. Avoid sudden turns and use extreme caution when changing direction on a slope.

#### **MAINTENANCE**

#### PERIODIC MAINTENANCE

Periodic maintenance should be performed at the following intervals:

| Maintenance Operation  | Every Use (daily) | Every 5 hrs or (daily) | Every 25 Hrs | Every 50 Hrs | Every 200 Hrs |
|--|-------------------|------------------------|--------------|--------------|---------------|
| Inspect for loose, worn or damaged parts.                                      | •                 |                        |              |              |               |
| Check for excessive vibration  |                   | •                      |              |              |               |
| Inspect belt for wear  |                   |                        | •            |              |               |
| Engine (See Engine Manual)   |                   |                        |              |              |               |
| Grease caster pivot points and lubricate height adjustment spacers             |                   |                        | •            |              |               |
| Sharpen Blade  |                   |                        | •            |              |               |
| Lubricate pivot points of all three control levers                             |                   |                        | •            |              |               |
| Check tire pressure  Note: inflate to mfr.'s specs. as shown on tire side wall |                   |                        | •            |              |               |
| Check brake puck   |                   |                        |              | •            |               |
| Check parking brake  |                   |                        |              | •            |               |
| Replace blade and traction belts   |                   |                        |              |              | •             |

**Note**: Blade, blade brake puck, transaxle brake, and drive belts are normal wear items. These should be inspected on a regular basis and replaced if worn.

#### **BLADE** Removal / Sharpening

NOTE: When sharpening the blade it is a good idea to check the balance of the blade. A properly balanced blade will increase life of the bearings and other components.

Tools required: ratchet, 3/4" inch socket, torque wrench, adequate support, block to inhibit blade rotation.

- 1. Disconnect spark plug wire.
- 2. Support front of unit to allow access to the blades.

Note: Unit is heavy. Be sure support is adequate to prevent personal injury.

- 3. Block the blade to prevent it from rotating during removal (see figure 17-4). For Each Spindle:
- 4. Remove the blade bolt (Item 35), lock washer (33), and large friction washer (103).
- 5. Remove the blade (18) and replace or sharpen the blade.

NOTE: Use only B.G.I. Part no. 520001(Standard blade) or B.G.I. Part no. 520002 (Mulch blade).

- 6. Reinstall the blade using all fasteners in the exact order they were removed (see figure 17-4).
- 7. Torque blade screw to 60 ft-lbs.

NOTE: Before installing the fasteners inspect them for wear and replace as necessary.

8. Reconnect spark plug wire.

Fig. 17-4

Fig. 17-5

When replacing one belt the other should be inspected for wear and replaced if worn. It is good practice to change both belts when either is worn beyond use. Use only original equipment belts for replacement. Billy Goat uses only premium quality, Kevlar corded and coated belts in your unit. Substitute belts do not meet the design and performance requirements for your unit, and will greatly reduce machine performance and belt life.

#### **Blade Drive Belt**

Tools required: ratchet, 3/4 inch socket, 10" extension bar for socket, two  $\frac{1}{2}$ " wrenches and adequate support for machine.

- 1. Disconnect spark plug wire.
- 2. Remove the deck belt cover.
- 3. Support front of unit to allow access to underside of the machine near the engine. Note: Unit is heavy. Be sure support is adequate to prevent personal injury.
- 4. Observe the orientation of the belt fingers (Item 90) under the engine.
- 5. Remove the 4 engine mount bolts (Item 48) being careful not to let engine slide out of place.
- 6. Remove the left and right belt fingers (These fingers are interchangeable).
- 7. Observe the orientation of the belt finger (Item 91) on idler (Item 50).
- 8. Loosen but do not remove idler/belt finger retaining nut (Item 144).
- 9. Observe belt routing and remove the belt from front spindle pulley (Item 46).
- 10. Remove the belt from the idler pulley and from the engine pulley.
- 11. Install new belt on engine pulley, idler and front spindle pulley following the original belt routing.
- 12. Position the idler belt finger centered on idler bracket and tighten the retaining nut (Item 144).
- 13. Reinstall the left and right belt guide fingers under the engine base using all fasteners in the exact order they were removed.

NOTE: Before installing the fasteners inspect them for wear and replace as necessary. 14. Torque the four engine bolts to 40 ft-lbs.

Note: With clutch levers engaged, be sure belt guides do not touch belts after installation, there should be 1/8" clearance between the belt and the guides.

15. Observe the idler pulley when the blade drive lever is lowered and released (see figure 17-7).

**NOTE**: Idler should tighten the belt when blade drive lever is pressed and the belt should be slack when the lever is released. With the lever depressed, the edge of the belt guide should not rub on the belt.

- 16. Replace the cover
- 17. Reconnect spark plug wire.
- 18. Start engine and check for proper operation of blade drive system.

## Spindle Drive Belt

Tools required: 3/8 inch socket, 1/2 inch socket.

- 1. Disconnect spark plug wire.
- 2. Follow steps to remove the Blade Drive Belt (on the spindle pulley side only) from the previous section.
- 3. Loosen the two idler plate nuts (Item 143).
- 4. Slide the belt idler to release the belt tension.
- 5. Observe the belt routing, then remove the old belt and install the new belt using the original routing.
- 6. Tension the belt using a long screwdriver or other pry bar to push the idler pulley against the belt.

Note: Take care not to damage the idler pulley.

- 7.Tighten the two idler plate nuts just enough to avoid slippage while checking the belt tension.
- 8. Check belt deflection. Finger pressure should give 0.5" to 0.75" (see figure 17-8).
- 9. Increase/decrease belt tension for proper deflection.
- 10. Finish tightening the two idler plate nuts.
- 11. Follow steps to reinstall Blade Drive Belt from the previous section.
- 12. Replace cover.
- 13. Reconnect spark plug wire.

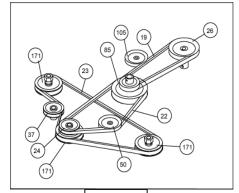

Fig. 17-6

Fig. 17-7

Fig. 17-8

## BILLY GOAT

#### FM Owner's Manual

#### BELT REPLACEMENT continued

Tools required: 1/2 Wrench or ratchet and 1/2 inch socket, adequate support for machine.

- 1. Remove the Blade Drive Belt (Steps 1-10: Blade Drive Belt Replacement Procedure).
- 2. Assure that spark plug wire is disconnected.
- 3. Support rear of unit to allow access to underside of the machine near the rear.

Note: Unit is heavy. Be sure support is adequate to prevent personal injury.

- 4. Observe the belt fingers (Item 63), position of idler and belt routing.
- 5. Remove the belt finger retaining nuts and bolts (Items 125 and 143).
- 6. Remove the belt finger and remove the belt from the transaxle pulley (Item 48).
- 7. Remove the belt from the drive idler (Item 105).
- 8. Remove the belt from the engine drive pulley (Item 85).
- 9. Install new belt on the top (small) engine pulley, drive idler and transaxle pulley using the original belt position and routing.
- 10. Reposition and secure the belt finger (Item 63) using the original bolts, washers and nuts. NOTE: Before installing the fasteners inspect them for wear and replace as necessary.
- 11. Reinstall the Blade Drive Belt (Steps 11-16: Blade Drive Belt Replacement Procedure). Note: With clutch levers engaged, be sure belt guides do not touch belts after installation.
- 12. Replace the cover
- 13. Reconnect spark plug wire.
- 14. Start engine and check both belts for proper operation of blade drive system and mower drive system.

MARNING: If the drive belt begins to squeal or slip, do not continue to operate your unit until adequate adjustment or repair has been performed. Improper adjustment can cause drive belt to slip and overheat, greatly reducing machine performance and transmission life.

#### **Brake Adjustment**

The brake control cable is spring-loaded and requires no adjustment; however, the transaxle brake is adjustable. When the mower is in neutral and can be pushed by hand without depressing the brake lever, the transaxle brake needs adjustment.

Using a ½ inch wrench turn the adjusting nut ¼ turn clockwise (see figure 17-1).

#### With the machine in neutral and:

- 1. The brake lever not depressed, the brake should be on and inhibit the machine from being rolled by pushing.
- 2. The brake lever depressed the brake should be off and the machine should roll uninhibited by the brake.

#### **Transaxle Drive Control Cable Adjustment**

When the transaxle drive belt slips, the drive control cable needs to be adjusted or the belt needs to be replaced with a new belt.

Cable Adjustment:

- 1. Using a 3/8" wrench, remove the rear access door (Item 51).
- 2. Using a  $\frac{1}{2}$  "open end wrench, turn the inside adjusting nut counter-clockwise and back it off 1/8", then tighten the outboard adjusting nut against the support bracket (see figure 17-2).
- 3. Check for proper operation. If the operation is not correct, repeat step 2.
- 4. Replace the access door.

The drive control cable adjustment should be the minimum amount required so the belt does not slip when the drive is engaged.

Blade Drive Control Cable Adjustment

When the blade drive control lever is depressed, the blades should turn and the blade drive belt should not slip. When the cable is properly adjusted the tension spring on the end of the control cable will open slightly (only enough for a piece of paper to slip between the coils). See figure 17-3.

Cable Adjustment:

- 1. Remove the deck belt cover (Item 81).
- 2. Observe the tension spring on the end of the cable when the blade drive lever is depressed. The spring should just break open.
- 3. If adjustment is required, using a ½" open end wrench, turn the inboard adjustment nut counter-clockwise and back it off 1/8" (Figure 4). Then tighten the outboard adjustment nut against the cable support bracket (Item 49).
- 4. Check the spring tension with the blade drive lever depressed.
- 5. Readjust the control cable as needed for proper tension.
- 6. Replace the deck belt cover.

Note: Too much tension will shorten belt and bearing life and too little tension will allow the belt to slip.

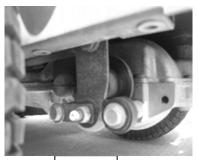

Fig. 17-1

Fig. 17-2

Fig. 17-3

#### **BRAKE PUCK REPLACEMENT**

Tools Required: 5/32" Allen wrench; 3/8" wrench.

- 1. Remove the spark plug wire.
- 2. Remove the belt deck cover.
- 3. Remove the brake spring (A) and control cable spring (B) (see figure 17-10).
- 4. Remove the blade drive belt (C) from the drive pulley (D).
- 5. Using a 3/8" wrench and 5/32" allen wrench, remove the nuts from the #10 puck retaining bolts (see figure 17-11).
- 6. Remove the bolts from the puck.

STARTER SWITCH WIRING

7. Remove the brake puck.

Note: The puck ends are symmetrical and can be interchanged to use a new braking surface unless both ends are already worn (Figure 4). When both ends have been used replace the puck with a new one.

- 9. Replace the spacer if it shows signs of wear.
- 10. Reassemble all parts in the same orientation as when removed.

Note: Be sure that the brake puck is centered and contacts both sides of the pulley groove after tightening.

Note: Before installing fasteners, inspect them for wear and replace as necessary. Be sure that when reinstalling control cable spring (B), the open side of the spring hook faces up.

11. Check the operation of the clutch and brake mechanism.

The drive belt should be slack and the brake engaged (center pulley will not turn easily by hand) when no pressure is exerted on blade drive lever.

**Note**: When the blade drive lever is depressed, the brake puck should not rub on the center pulley, the belt should be under tension, and not rub on the belt finger (see figure 17-10).

13. Replace the belt cover and connect the spark plug wire. Start the engine and check the clutch/brake operation under power.

**Note**: When the blade clutch control lever is pressed down, the blades should spin up to speed without belt slippage indicated by a pronounced belt squealing sound. When the clutch control lever is released, the blades should stop spinning in 5 seconds or less.

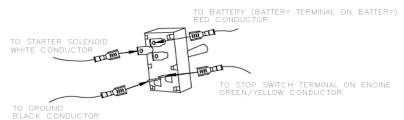

Fig. 17-9

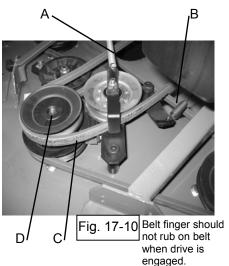

Fig. 17-11

#### **Troubleshooting**

| P roble m                                      | Possible Cause  | S o lu tio n  |
|--|---|---|
| Engine will not start.                         | Choke not on. Out of gasoline, bad or old gas.<br>Spark plug wire disconnected. Dirty air<br>cleaner. Blade clutch is engaged                     | Move throttle to start position. Check<br>Gasoline. Check for spark with an<br>approved tester. Clean or replace air<br>cleaner. Disengage the Blade clutch<br>lever.   |
| Engine will not stop                           | Dam aged control cable. Harness Wire is disconnected or dam aged. Dam aged ignition switch.   | Replace control cable. Reconnect<br>harness wire or replace if damaged.<br>Replace switch.  |
| Engine runs poorly                             | Spark plug wire loose. Engine RPM set too low. Carburetor out of adjustment. Water or dirt in fuel system. Spark plug fouled, faulty or wrong gap | Sharpen or replace blade (pg 13). Check engine RPM (refer to engine manual). Adjust carburetor (refer to engine manual). Reset gap or replace spark plug (refer to engine manual).  |
| Abnorm al vibration.                           | · Loose or out of balance blade. Bent blade.<br>Loose engine bolts  | Stop work im mediately. Check blade<br>mount and balance. Replace damaged<br>or bent blade if required (pg 13). Check<br>engine mount.  |
| Uneven cut                                     | Height adjust is not set correctly. Dull or bent blade. Tire pressure low on one side.  | Be sure height adjust is set the same on<br>both sides(pg 11). Sharpen or replace<br>blade (pg 13). Adjust pressure.  |
| W ill not cut or has poor cutting perform ance | Dull or bent Blade. Clogged deck. Engine running at too low RPM. Wet Grass. Excessively high grass.   | Sharpen or replace blade (pg 13). Unclog deck(pg 11). Check engine RPM (refer to engine manual). Do not mow when grass is wet. Mow once at a high cuting setting then mow again at desired setting or make a narrower cutting path. |

| Engine is locked, will not pull over.          | Debris locked against blade. Dam aged engine.<br>Broken control cable.  | Rem ove debris (pg 11). Refer to engine owner's manual. Replace control cable.  |

When servicing engine refer to specific manufacturers engine owner's manual. All engine warranty is covered by the specific engine manufacturer. If your engine requires warranty or other repair work contact your local servicing engine dealer. When contacting a dealer for service it is a good idea to have your engine model number available for reference(See table page 11). If you cannot locate a servicing dealer in your area you can contact the manufacturers national service organization.

#### WARRANTY CLAIM PROCEDURE

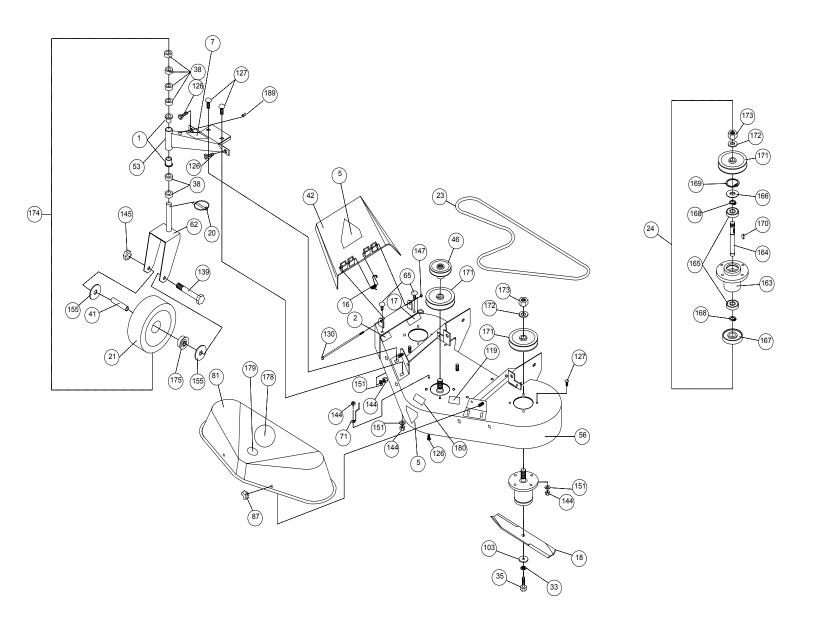

Should a BILLY GOAT <sup>®</sup> machine fail due to a defect in material and/or workmanship, the owner should make a warranty claim as follows:

- The machine must be taken to the dealer from whom it was purchased or to an authorized Servicing BILLY GOAT Dealer.
- The owner must present the remaining half of the Warranty Registration Card, or, if this is not available, the invoice or receipt.
- The Warranty Claim will be completed by the authorized BILLY GOAT Dealer and submitted to their respective BILLY GOAT Distributor for their territory Attention: Service Manager. Any parts replaced under warranty must be tagged and retained for 90 days. The model number and serial number of the unit must be stated in the Warranty Claim.
- The distributor service manager will sign off on the claim and submit it to BILLY GOAT for consideration.
- The Technical Service Department at BILLY GOAT will study the claim and may request parts to be returned for examination. BILLY GOAT will notify their conclusions to the distributor service manager from whom the claim was received.
- The decision by the Technical Service Department at BILLY GOAT to approve or reject a Warranty Claim is final and binding.
